

Inferring Specifications from API Documents

Dejun Qian

Problem

01: ...

02: <param name="proc_name"> This
name needs to be a valid identifier, which
is no longer than 32 characters

</param>

03: ...

04: void DefineProperty(string prop_name)

Problem

01: ...

02: <param name="proc_name"> This
name needs to be a valid identifier, which
is no longer than 32 characters

</param>

03: ...

04: void DefineProperty(string prop_name)

Problem

01: ...

02: <param name="proc_name"> This
name needs to be a valid identifier, which
is no longer than 32 characters

</param>

03: ...

04: void DefineProperty(string prop_name)

01:

02: GetPropName(prop_name);

03:

04: DefineProperty(prop_name);

Problem

01: ...

02: <param name="proc_name"> This
name needs to be a valid identifier, which
is no longer than 32 characters

</param>

03: ...

04: void DefineProperty(string prop_name)

01:

02: GetPropName(prop_name);

03:

04: DefineProperty(prop_name);

01:

02: GetPropName(prop_name);

03:

requires(!prop_name.length()>32)

04: DefineProperty(prop_name);

Problem

01: ...

02: <param name="proc_name"> This
name needs to be a valid identifier, which
is no longer than 32 characters

</param>

03: ...

04: void DefineProperty(string prop_name)

01:

02: GetPropName(prop_name);

03:

04: DefineProperty(prop_name);

01:

02: GetPropName(prop_name);

03:

requires(!prop_name.length()>32)

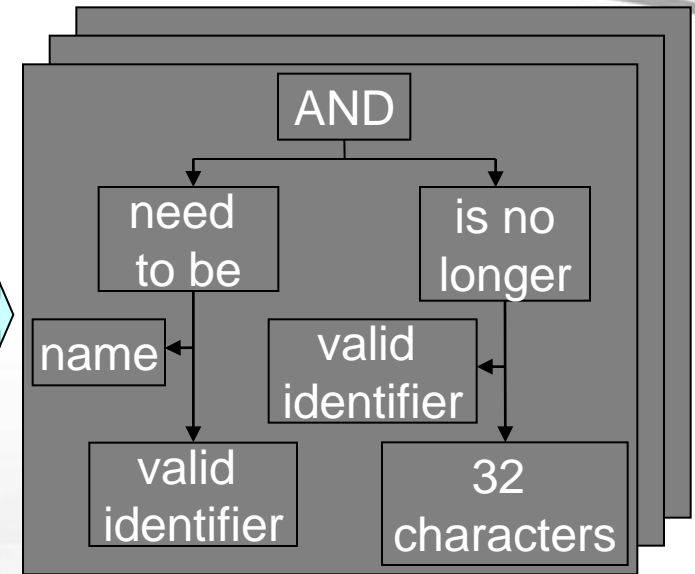

04: DefineProperty(prop_name);

Solution

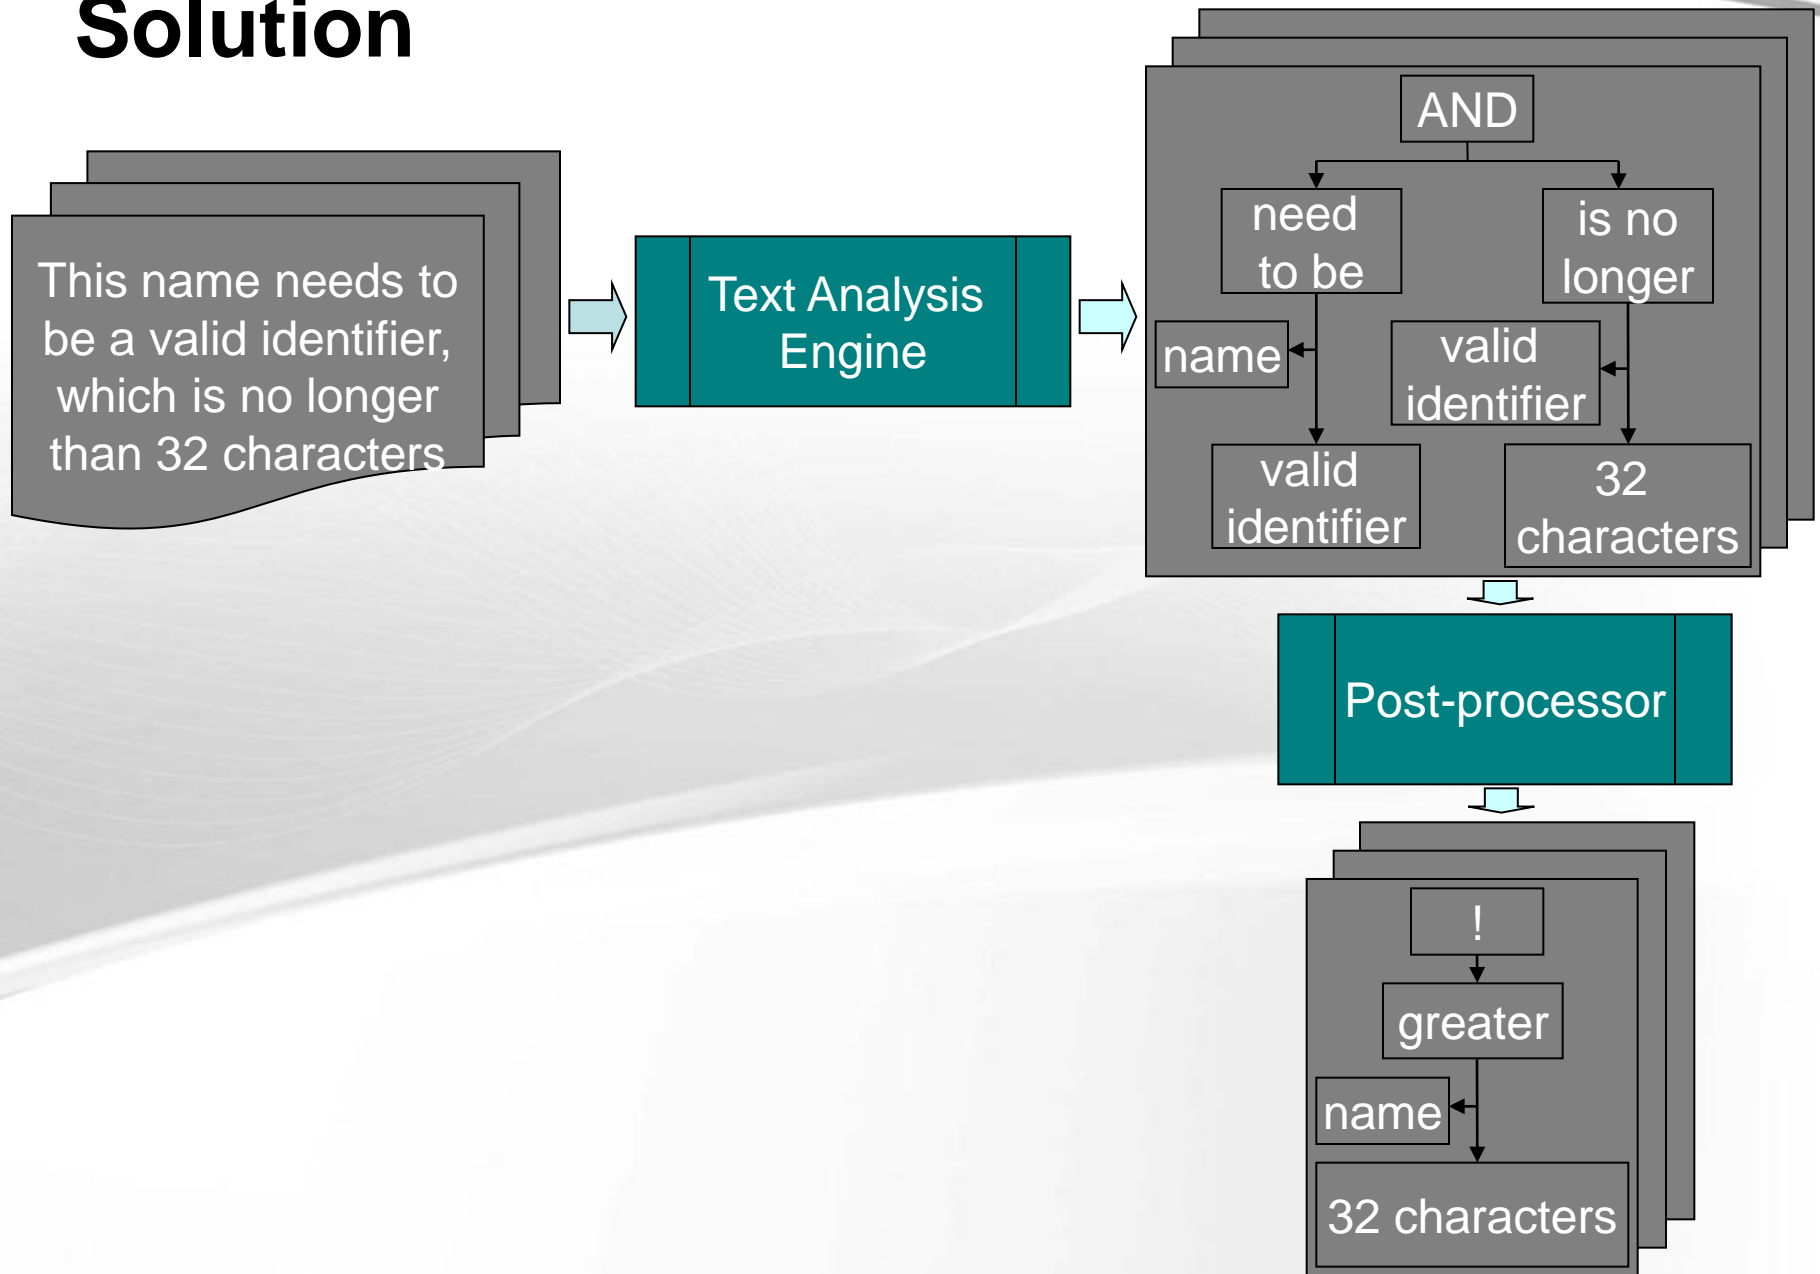

This name needs to be a valid identifier, which is no longer than 32 characters
